

*The cow brush for intensive grooming*

**2-YEAR WARRANTY  
ON ALL KVIA  
COW BRUSHES**

## The Molly Cow Brush

When it comes to grooming, Molly is the ultimate cow brush. This brush has an extra feature with a top brush. The top brush provides an intensive, stimulating, and deep grooming of the head, back and tail area.

The intensive brushing has a high preventive impact on many forms of skin conditions. The lower part of the brush grooms and stimulate the back and sides. Intensive brushing produces a clean and shining coat.

The brush is attached to a universal joint which facilitates free movement and provides optimal grooming. Molly is one of the few brushes that can serve several cow simultaneously.

**BEST  
BECAUSE  
IT LASTS**

# Molly

## More welfare, more milk, and with low energy costs

Molly starts via a motion sensor the moment a cow pushes the brush. The brush pauses automatically if it has not been activated for 50 seconds. After each start-up, the brush changes rotational direction. This feature extends the wear and tear of the brush elements. Overload protection ensures the brush stopping automatically if a cow tail becomes entangled in the brush.

We designed Molly with quality and sustainability in mind. The structure and brush bearings are made with components that guarantee a long-lasting brush with low maintenance costs. Molly is made of stainless steel and features a helical gear that drives the brush with an impressive 98% efficiency which results in a significant reduction in energy consumption. What makes Molly so special is the special energy saving feature, using 50% less power, in comparison with similar cow brushes on the market. The motor and helical gear are fixed on a bracket that does not swing with the brush, thereby preventing broken cables. The control system of Molly is completely unique, featuring frequency control for soft start/stop. To power the brush, simply plug it into an ordinary earthed socket (230 volts).

## The Nora Cow Brush

Nora is suitable for cows of all sizes and only requires that the cow does the work as the brush is non-motorized. Nora is a major asset in every cowshed, providing the cows with an activity while keeping them clean. The brush is attached to a universal joint to facilitate free movement and can be used by several cows simultaneously.

**BEST  
BECAUSE  
IT LASTS**

## Designed with focus on quality and durability

Nora is suitable for all dairy cows and heifers and is produced in accordance with Danish legislation for rotating brushes for dairy cows.

The Nora brush rotates when cows and heifers use the brush by pushing it.

Nora is designed and developed with quality and sustainability in mind. The brush shaft and structure are produced with components that guarantee a long-lasting brush with low maintenance. Nora is produced in stainless steel, and it is connected to a strong universal joint. The Nora has no motor and does not require any power connection.

The Nora brush can be applied and used by dairy cows, heifers, horses, goats and sheep. The brush has a stimulating effect on many farm animals and guarantees top animal welfare.

COW BRUSHES**

## The Nora Mini Cow Brush

Nora Mini is a compact version of the popular Nora cow brush. It is ideal for both large and small cows. With a rotating brush that is activated by touch, Nora Mini provides activity for the cows and keeps them clean. It is mounted with a universal joint for free movement and can be used by several cows at the same time. Nora Mini is a practical and efficient solution for the stable.

**BEST  
BECAUSE  
IT LASTS**

## Designed with a focus on durability and sustainability

Nora Mini is suitable for all types of cows and heifers and complies with Danish regulations for the use of rotating brushes for dairy cattle.

With Nora Mini, your cows or heifers get the chance to do some of the hard work themselves by being active and pushing against the brush. The brush is activated when the animals push against it or walk under it.

Nora Mini is created with an emphasis on quality and longevity. Therefore, both the construction and the brush axle are made with components that ensure you get a brush that lasts for many years and minimizes maintenance costs. The brush is made of stainless steel and mounted with a robust universal joint. Since Nora Mini does not have a motor, there are also no operating costs associated with electricity.

The Nora brush can be used for cows, heifers, horses, goats, and sheep to ensure optimal fur care while increasing animal welfare.

## The Otto Cow Brush

Otto is suitable for both dairy cows and heifers, providing excellent grooming that concentrates on the head, back and tail area, resulting in a clean, shiny coat. Otto provides in-depth grooming of the area around the pin bones and tail head. The intensive brushing has a high preventive impact on many forms of skin conditions.

You can place Otto anywhere – even when space is limited. So, if you have limited space, Otto is the perfect choice

**BEST  
BECAUSE  
IT LASTS**

# Otto

## Long lasting brush with low energy costs

Every time a cow pushes the brush, it starts automatically. The cow brush then stops, if it has not been active for 90 seconds. After each start-up, the brush changes rotational direction. This feature extends the wear and tear of the brush elements.

We designed Otto with quality and sustainability in mind. The structure and brush bearings are made with components that guarantee a long-lasting brush with low maintenance costs. Otto is made of stainless steel and features a helical gear that drives the brush with an impressive 98% efficiency which results in a significant reduction in energy consumption. What makes Otto so special is the energy saving feature, using 66% less power in comparison with similar cow brushes. The control system of Otto is completely unique, featuring frequency control for soft start/stop. To operate the brush, simply plug it into an ordinary earthed socket (230 volts).

## The Mammoth Cow Brush

Mammoth is an extremely tough brush, specially designed for grooming larger animals. This brush is perfect for the caring of bulls, meat cattle, horses, and camels. Mammoth requires only a minimum amount of space. It is a stationary, and alternating brush and does not require a power connection. Mammoth is the best alternative to a motorised brush. The brush can swing from side to side and has no limitations or fixed blocks.

**BEST  
BECAUSE  
IT LASTS**

# The Mammoth

## The brush that lasts for decades

The Mammoth brush involves your beef cattle, bulls, horses, and camels to do the hard work. Your animals activate and push the brush to the area that requires care to boost circulation, and strength.

We designed Mammoth with quality and sustainability in mind. Mammoth is made of highly durable materials and guarantees you a top-quality stationary brush. The structure of the cow brush is made of stainless steel, all other elements and parts of the brush are made of a special long-lasting durable nylon. We designed the Mammoth brush to last and withhold.
